

With Princeton Identity, your eyes are the most secure and reliable credential possible - revolutionizing access control! Thanks to our foundational technology – Iris on the Move™ – our solutions deliver scalable security and convenience while boosting productivity and lowering overhead costs.

Why Iris Biometrics?

The structure of the human iris forms randomly (independent of genetics), contains a staggering quantity of information, and is unchanged from infancy through your entire life. This makes it the ultimate biometric - more unique and more stable than any other, including DNA, fingerprint, and especially your FACE!

What is Iris on the Move™ (IOM)?

IOM is our proprietary system for acquiring sharp iris images. We mitigate blurring from sub-millimeter human motion and systematically optimize everything from hardware to algorithm to achieve quick and effortless glance-based user identification.

Is it fast?

Yes, the fastest! IOM's glance and go iris matching takes just a few tenths of a second. Blink, and you'll miss it!

More than Iris?

Our EyeAllow™ edge device can poll any combination of six modalities (iris, face, card, digital mobile, PIN, and QR code) for the ultimate MFA configurability.

What about outdoor operation?

Our Access 200w™ is a rugged all-weather edge device that delivers the same world-class features, performance, and configurability outdoors - day and night, in rain, shine, snow, or heatwave.

How convenient is it?

Our fast glance-and-go solutions seamlessly adapt to user workflows, and are unaffected by any amount of face / head coverings, PPE, masks, veils, sunglasses, makeup, jewelry, etc. Your iris credential is ageless and never needs updating, and with no card to lose or forget, convenience is assured!

Does it Scale?

You bet! Unlike less unique and stable face credentials, Iris on the Move™ recognition can distinguish millions of users, and PI's architecture supports multiple site and even multi-continent operation!

Is Privacy a concern?

Not at all! In fact, your iris is a private credential (your face certainly isn't), and we protect PII with strong encryption, non-reversible biometric templates, and volatile memory in our edge devices (user data lost upon disconnection). Your biometrics are stored locally and never exposed outside your organization!

How complicated is setup?

Bolt-on hardware and single-wire power/data connection is easy, while pre-developed APIs simplify integration between the Identity Server and your backend security platforms.

What about enrollment?

It's quick and painless to establish your entire workforce with PI's innovative Seamless Enrollment features to simplify processing and drive adoption.

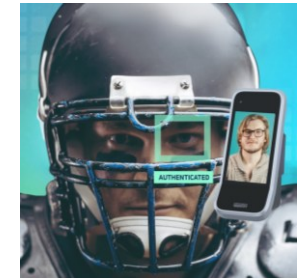

Which are ideal applications?

Although our identity assurance solutions are flexible enough to fit any situation, they offer unique value where applications require the highest security (datacenters, laboratories, critical infrastructure), or when users will have obscured faces (healthcare, manufacturing, athletics), or especially for installations with larger user populations (over 1000), multi-site operations, or outdoor installations.

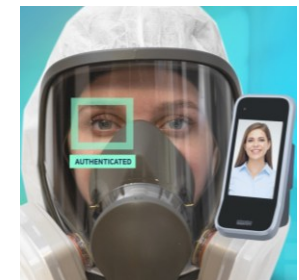

How does the price compare?

Biometric readers cost more than card scanners, but their total cost of system ownership saves money over time! When YOU ARE THE CREDENTIAL, there are no consumables or per-user costs, and no need for a 'badge office'. And don't forget your organization's reduced risks and productivity / efficiency gains.

Why work with Princeton Identity?

Princeton Identity has over 20 years experience delivering innovation, forward product design, and world-class iris-biometrics solutions with unprecedented speed, accuracy, and convenience. We are trusted by leaders in banking, manufacturing, higher education, research, and border control to safeguard their most critical operations. And of course, we alone have the Iris on the Move™ technology, because we believe identity assurance should be about **You, Not Your Appearance!** Reach out for a demonstration to see how Princeton Identity can help your organization harden security and save money. Visit us at www.PrincetonIdentity.com to setup an appointment.

Princeton Identity is a leading innovator of iris-biometric and multi-factor authentication technologies, transforming how businesses and governments around the globe achieve secure and reliable identity assurance. Backed by over two decades of research and product design, our solutions are trusted by some of the most recognized names in banking, industry, higher education, healthcare, transit, and border control. Princeton Identity systems are proudly manufactured in the USA, and deliver unparalleled flexibility, accuracy, convenience, and scalability.
