

## Seamless Enrollment

Multiple workflows simplify organizational transition

One of the biggest challenges with any access control or identity management system is enrolling large numbers of users – especially in enterprise environments. Manual enrollment is time-consuming, error-prone, and carries significant overhead and productivity costs.

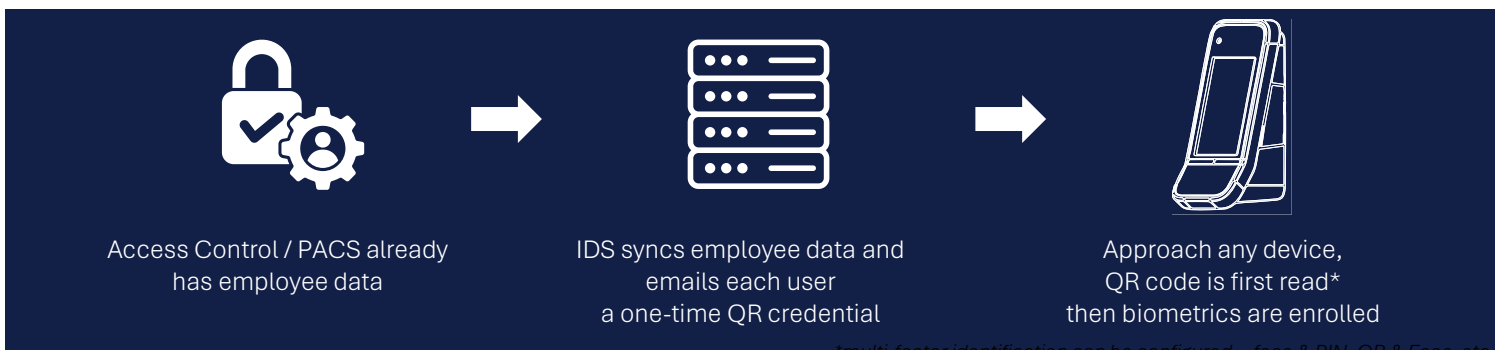

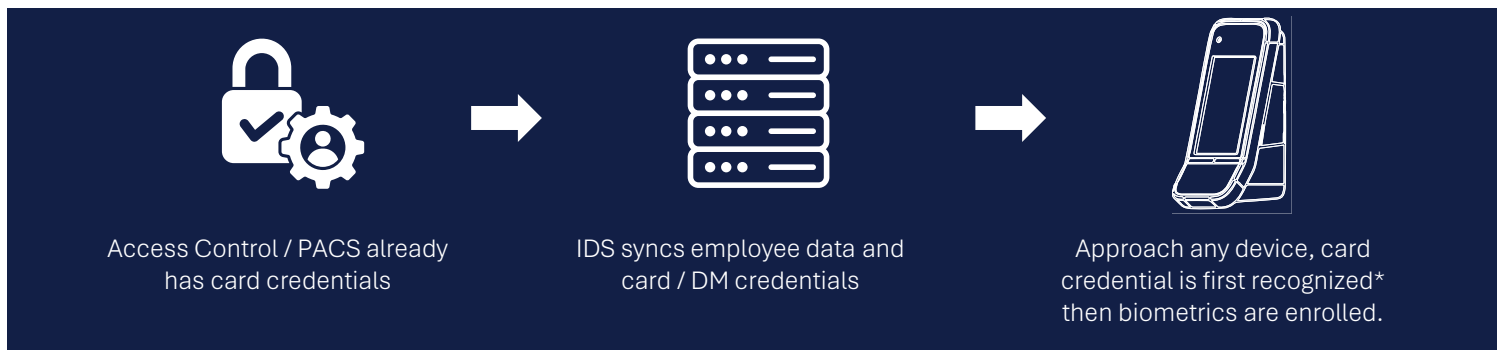

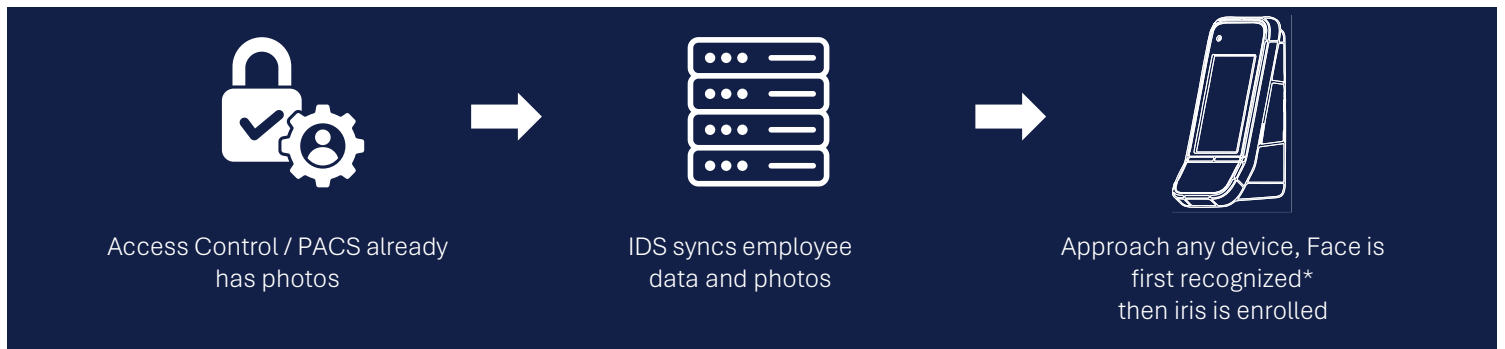

Princeton Identity's innovative **Seamless Enrollment** features eliminate these burdens. In fact, enrolling your entire workforce with our solution couldn't be faster or easier!

First, you'll upload existing employee databases into our **Identity Server (IDS)** to enroll names and any available credentials like card numbers, PINs, and even faces. No manual data entry is required because we've partnered with industry leaders in access control – Lenel, Genetec, Software House, AMAG, and more – as well as the main time and attendance and point of sale providers to provide off-the-shelf API integrations that make connecting a breeze!

Once complete, the system can then be configured to allow for on-the-edge enrollment of new user credentials – iris, face, or even a new card – after successful identification via one of the existing and newly-uploaded credentials. Furthermore, *any or all of your installed network of edge devices can be configured for this enrollment step*, making it convenient for the users while un-burdening overwhelmed badge offices. It's a Win – Win!

PI's solutions are fully customizable to comply with ANY security and workflow requirements, but three of the more common PI-supported seamless enrollment workflows are shown on the following page. User can authenticate with a card, their face, a QR code, or some multi-factor combination of these and other options. Then, on-screen guides and instructions help users complete the process and capture high quality biometric enrollment images every time.

*Multi-factor identification can be configured...face & PIN, QR & Face, etc.*

**Seamless Enrollment** is just one of the ways Princeton Identity sets the standard for SECURITY, CONVENIENCE, SIMPLICITY, and FLEXIBILITY – helping to reduce operational costs while boosting user productivity and satisfaction.

Ready to see it in action? Schedule a demonstration today at [www.PrincetonIdentity.com](http://www.PrincetonIdentity.com).

Princeton Identity is a leading innovator of iris-biometric and multi-factor authentication technologies, transforming how businesses and governments around the globe achieve secure and reliable identity assurance. Backed by over two decades of research and product design, our solutions are trusted by some of the most recognized names in banking, industry, higher education, healthcare, transit, and border control. Princeton Identity systems are proudly manufactured in the USA, and deliver unparalleled flexibility, accuracy, convenience, and scalability.
