

Princeton Identity is redefining identity assurance with our flagship innovation: Iris on the Move™. Trusted by leading institutions around the world, this groundbreaking solution secures mission-critical operations while streamlining everyday access. Combining uncompromising security with measurable value for users and organizations, Iris on the Move™ sets the standard for next-generation workplace biometrics.

## User Benefits

### Convenience

With biometrics, there are no badges to carry or lose, passwords to remember, or PINs to reset. You are the credential. Princeton Identity devices recognize the patterns of your iris, the most unique and stable physical marker of who you are, in under a second and from arm's length. With just a glance, you keep moving effortlessly throughout your day. Plus, unlike the face, the iris never changes. One quick enrollment lasts for your entire career.

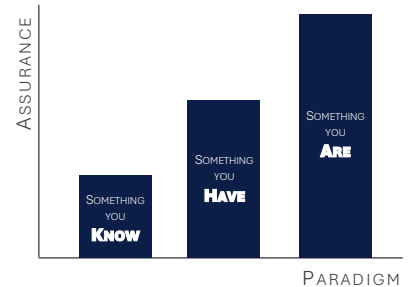

IRIS	CHARACTERISTICS	FACE
✓	UNIQUENESS - ACCURATE	
✓	STABILITY - AGE-PROOF	
✓	HIGH INFORMATION CONTENT - SCALABLE	
✓	GENETICS INDEPENDENT - BIAS FREE	
✓	SELF CLEANING & REDUNDANT	
✓	UNAFFECTED BY MASK, VEIL, SUNGLASSES	
✓	SPOOF RESISTANT, PRESERVES YOUR PRIVACY	

### Privacy

Princeton Identity solutions are designed to protect your personal information. We employ the strongest encryption methods for in-transit data, and your biometrics are stored as non-reversible mathematical templates. Biometric data is kept exclusively on your organization's secured servers; no other parties, including Princeton Identity, have access to it. Our edge devices also safeguard your privacy. Equipped with volatile memory, all data is wiped clean whenever a reader is removed from the wall or taken from service.

### Safety

The most important element of workplace security is controlling who gets in. Traditional credentials – like passwords, PINs, cards, or phones – can be lost, stolen, copied, or shared. Biometric credentials can't be separated from their owner, ensuring every identification is authentic. However, all biometrics are not created equal. Princeton Identity's Iris on the Move™ technology delivers accuracy and flexibility that far surpasses face recognition. Users can remain fully protected with masks, goggles, face shields, respirators, and other protective gear, making authentication both safer and more practical in demanding real-world conditions.

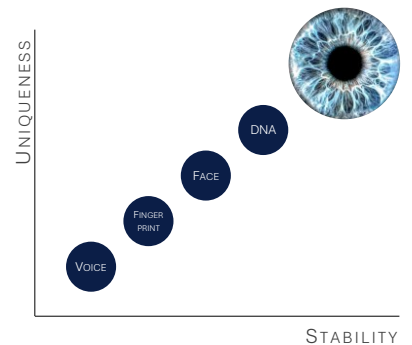

### Ease of Use

Iris on the Move™ proves that tight security doesn't have to slow people down. Our devices wake on approach and provide on-screen guidance and feedback for intuitive operation. Proprietary technology ensures glance and go use that's tolerant of your angle, movement, pose, and lighting conditions. Hats, glasses, veils, scarves and masks can stay on, as they have no effect on performance.

# Organizational Benefits

## Scalable High Security

Leveraging the most unique and stable biometric, Iris on the Move™ can distinguish every person on the planet, making it orders of magnitude better suited for large database N-N matching than any face or fingerprint-based solution. Our system architecture supports multi-site deployments, and Identity Server can be implemented with unlimited parent-child levels, meaning the total Iris on the Move™ solution will deliver consistent, high-assurance security with well over 1M enrolled users and thousands of devices spread over hundreds of sites – even across continents!

## Compliance

For the highest levels of protection, Princeton Identity solutions support multifactor authentication with six built-in modalities, enabling you to layer security based on user, application, or regulatory need. Combined with strong encryption and defensible audit trails, we help organizations meet stringent compliance requirements with ease.

## Fast Setup

As a bolt-on solution, both our indoor and weather-proof outdoor readers connect with just a single power / data cable. Pre-built APIs with leading access control platforms simplify backend integration, while intuitive software tools streamline configuration. With minimal training, your team can be up and running with confidence from day one – hardening security without disrupting business!

## Lightweight Administration

Managing your system should never be a burden. Iris on the Move™ administration and maintenance are easily accomplished through a highly intuitive web-portal interface. Define user groups, set access levels, and monitor activity with just a few clicks. Seamless Enrollment features simplify onboarding and drive user adoption – enabling organizations to credential entire workforces with minimal effort. And because the iris never changes, re-enrollment is never required, streamlining credential management for years to come.

## Low Total Cost of Ownership

Biometrics offer clear and quantifiable financial advantages! Although card scanners might cost less up front, the expense of producing, replacing, and managing credentials quickly adds up. Princeton Identity eliminates those recurring expenses, freeing IT and administrative resources for higher-value priorities. At the same time, hardening security with accurate, unspoofable iris recognition reduces risk exposure, liability, and downtime. You'll see a measurable return on investment that compounds year after year.

- MATERIALS AND RECURRING CONSUMABLES
- ORGANIZATIONAL RISKS AND LIABILITIES
- EMPLOYEE PRODUCTIVITY & ORGANIZATIONAL EFFICIENCY

## World-class Support

With Princeton Identity, we value each customer – big and small – and deliver best-in-class, responsive, 24/7/365 support. We'll deliver to custom requirements, and you'll get access to our growing catalog of capabilities with each quarterly release of new features!

Princeton Identity is a leading innovator of iris-biometric and multi-factor authentication technologies, transforming how businesses and governments around the globe achieve secure and reliable identity assurance. Backed by over two decades of research and product design, our solutions are trusted by some of the most recognized names in banking, industry, higher education, healthcare, transit, and border control. Princeton Identity systems are proudly manufactured in the USA, and deliver unparalleled flexibility, accuracy, convenience, and scalability.
